

CLINICAL PROGRESS NOTE: 08/12/2018

Provider: Workplace Health Clinic | **Patient:** Doe, John

ADJUSTER LANDMINE: This record documents a "Workplace Lifting Incident" resulting in chronic lower back pain 8 years prior to the current MVA.

Subjective:

Patient reports "popping" sensation in lower back while moving heavy crates at work yesterday. Complains of radiating soreness into left buttock. Pain scale 6/10. Patient expresses concern about ability to continue warehouse duties.

Assessment:

L4-L5 Lumbar Strain. Rule out disc involvement. Rx: Ibuprofen 800mg; Physical Therapy x4 weeks. Light duty restrictions for 14 days.

Disposition:

09/15/2018: Patient completed 4 weeks of PT. Reports symptoms resolved. Discharged at MMI with no permanent restrictions. No MRI performed at that time.

CM FORENSIC NOTE: We will use this record to prove that John's back was *asymptomatic* for 8 years until the F-150 impact, supporting the **Aggravation of a Pre-existing Condition** argument.
